10/5/8644

Application No.: 10/518,644

§116 Amendment

Attorney Docket No.: 043058

**AMENDMENTS TO THE CLAIMS** 

This listing of claims replaces all prior versions of claims in the application.

1-3. Cancelled.

4. (Currently amended): A producing method of a sp3-bonded boron nitride, represented by a general formula BN, having a hexagonal 5H or 6H polytypic form and having a property of

emitting light in ultraviolet region, the method comprising: inserting boron nitride as a boron

nitride solid raw material into a reaction chamber while introducing reaction mixed gas

containing nitrogen being diluted with dilution gas into the reaction chamber; converging and

emitting ultraviolet laser of from 190 nm to 400 nm wavelength onto the boron nitride solid raw

material so as to vaporize, generate radical containing boron or BN precursor matter; and

irradiating a surface of a substrate placed in the chamber, a growing surface on the substrate, and

a growing spacing region about the growing surface with ultraviolet light to cause gas phase

reaction between the reaction mixed gas containing nitrogen and the radical containing boron or

re-coagulation reaction of the BN precursor matter in the vaporized state, thereby generating,

depositing, or growing a sp3-bonded boron nitride, represented by a general formula BN, having

a hexagonal 5H or 6H polytypic form and having a property of emitting light in ultraviolet region

on the substrate.

5. (Currently amended): A producing method of a sp3-bonded boron nitride, represented

by a general formula BN, having a hexagonal 5H or 6H polytypic form and having a property of

emitting light in ultraviolet region, the method comprising: inserting boron nitride as a boron

Application No.: 10/518,644

§116 Amendment

Attorney Docket No.: 043058

nitride solid raw material into a reaction chamber while introducing reaction mixed gas

containing boron and nitrogen being diluted with dilution gas into the reaction chamber;

irradiating the boron nitride solid raw material with plasma as well as ultraviolet laser of from

190 nm to 400 nm wavelength so as to vaporize, generate radical containing boron or BN

precursor matter; and irradiating a surface of a substrate placed in the chamber, a growing surface

on the substrate, and a growing spacing region about the growing surface with ultraviolet light to

cause gas phase reaction between the reaction mixed gas containing nitrogen and the radical

containing boron or re-coagulation reaction of the BN precursor matter in the vaporized state,

thereby generating, depositing, or growing a sp3-bonded boron nitride, represented by a general

formula BN, having a hexagonal 5H or 6H polytypic form and having a property of emitting light

in ultraviolet region on the substrate.

6. (Previously presented): A producing method of a sp3-bonded boron nitride,

represented by a general formula BN, having a hexagonal 5H or 6H polytypic form and having a

property of emitting light in ultraviolet region, as claimed in claim 4 or 5, wherein the dilution

gas is noble gas, hydrogen, nitrogen, or mixed gas consisting of two or more of these and the

ratio of the reaction mixed gas to the dilution gas is 100:0-100% by volume.

7. (Original): A producing method of a sp3-bonded boron nitride, represented by a

general formula BN, having a hexagonal 5H or 6H polytypic form and having a property of

emitting light in ultraviolet region, as claimed in claim 4 or 5, wherein the ultraviolet laser is

pulse laser.

Application No.: 10/518,644

§116 Amendment

Attorney Docket No.: 043058

(Previously presented): A producing method of a sp3-bonded boron nitride,

represented by a general formula BN, having a hexagonal 5H or 6H polytypic form and having a

property of emitting light in ultraviolet region, as claimed in claim 5, wherein by applying

modulation synchronizing laser pulse onto the plasma, the plasma is packeted so as to generate,

deposit, and grow a sp3-bonded boron nitride, represented by a general formula BN, having a

hexagonal 5H or 6H polytypic form and having a property of emitting light in ultraviolet region

and which has improved crystalline property.

9-15. Cancelled.
